

# DD Tarp 4x4 - SPEC SHEET

The spacious group shelter

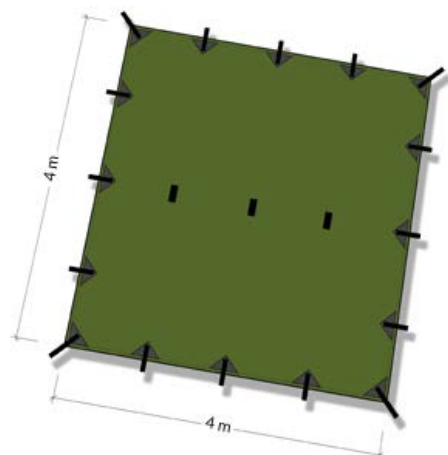

The massive DD Tarp 4x4 is the ultimate dry cover solution for groups, teams and work spaces. 19 reinforced attachment points allow it to be set up in countless different formations, whether that's to cover a few hammocks at once or to form a sturdy shelter for you and your friends.

## Your team's go-to shelter

You can count on the DD Tarp 4x4 to shelter you and your team from the elements on a backpacking trip, event or work activity. Close it off or make it a canopy - it will stand up against anything the weather has to throw at you! Alternatively, use it to extend your caravan porch or form it into a customisable tent for you and your friends out on the trail. We could go on - why not discover more options for yourself?

**SIZE:**  
4m x 4m

**PACKED SIZE:**  
26cm x 17cm x 4cm

**WEIGHT:**  
1290g (tarp only)

**COLOURS:**  
Olive green  
Coyote brown  
MC

## WHAT IS INCLUDED:

- Tarp
- 4 pegs and guy lines in a bag
- Stuff Sack

## FEATURES:

19 tough reinforced attachment points: 16 around the sides and corners, and 3 along the centre (ridge line). The central seam is taped and fully waterproof. All side attachment points have reinforced PVC patches and are incredibly strong.

## MATERIAL:

190T polyester with PU 3000mm waterproof coating

## USES:

Ideal for team or group shelters - it can cover a small number of hammocks at once, or provide day shelter on backpacking trips. You can also set it up on the ground as a tarp tent or bivi.

# DD Tarp 4x4 set-up options:

## A-Frame

The tarp can be hung from a rope (ridge line) between two trees using the central attachment points on top.

Once the centre line is in place, the 4 corners can be pegged out using the guy ropes and then additional side points pegged out if required.

## Diamond

*End-to-end protection.*

A useful set-up option for use with hammocks in windy conditions when rain can blow in from the ends.

Simply tie two corners to two trees or posts, and then using the pegs and guy lines peg the other two corners into the ground to create the diamond set-up as shown.

In very strong winds you can also tie out some of the other attachment points to create a solid shelter.

## Lean-to

*Great for day shelter or for several people sleeping on the ground.*

Various lean-to shelter styles can be created by pegging one side of the tarp down to the ground, and using the rest of the attachment points to increase the height or the amount of roof cover.

Useful if you are on the move, the lean-to shelter can be set up in minutes and provides a great shelter for lunch or rest stops.

## Ground/Bivi Shelter

*Great for day shelter or for up to 3 people sleeping on the ground.*

Ground or Bivi set-ups allow you to sleep under the tarp on the ground. These styles of shelters can be achieved without trees. Using a hiking pole or strong sticks to support, the rest can be pegged to the ground or to posts as needed.

With the large number of attachment points it is easy to adjust these setups to suit the weather conditions and number of people.

## Tarp-tent

*There are many tarp tent set-ups possible using the DD 4x4 Tarp.*

Now we're getting into tarp origami! This looks fairly complex but in fact is easy to achieve - a hiking pole or a stick with padding on top is ideal to support the tarp from inside, and the rest is pegged to the ground.
